IOT AND SHORT-RANGE DEVICES

Dominican Republic sets clear rules for 915–928 MHz devices

INDOTEL Resolution 074-2026 lets IoT sensors, telemetry, smart meters and RFID use 915–928 MHz without an individual frequency licence. Type approval is still required, and products built for the US 902–928 MHz band must be set to stay within 915–928 MHz.

SINCE OUR OCTOBER BULLETIN

Three regulatory updates for manufacturers

27 Aug 2026 guide: Oct 2026

Dominican Republic · INDOTEL

Resolution 074-2026 sets the operating conditions for 915–928 MHz under a generic licence. In October, INDOTEL published a public guide explaining them.

- Up to 100 mW EIRP for general low-power devices.
- Up to 1 W EIRP with frequency hopping or digital modulation.
- Up to 4 W EIRP for industrial or commercial RFID, only in 920–926 MHz.

8 Oct 2026

Chile · SUBTEL

SUBTEL amended the technical standard for limited telecommunications services and extended the 2,300 MHz band up to 2,360 MHz, giving 60 MHz for private and industrial networks (5G, 5.5G and future 6G).

14 Oct 2026

Turks and Caicos · Telecommunications Commission

The Commission published the Telecommunications (Fee Structure) Amendment Regulations 2026. If you hold or plan licences or approvals there, check the updated fees.

Good to know before your next launch

✓ **FCC or CE marks do not replace local approval**
INDOTEL's guide is explicit: a foreign certification should not be assumed to replace Dominican type approval. Your CE or FCC test reports are usually enough to obtain it. No local testing or samples are needed in 34 of 35 countries.

✓ **Local representative included**
We hold the certificate in each country at no extra charge, so you don't need an importer.

✓ **Certificate validity varies**
Most countries have no expiry. Venezuela: 1 year. Paraguay, Aruba, Trinidad and Tobago: 5 years. Bolivia, Cayman Islands, Saint Lucia: 10 years. Uruguay: 15 years.
